

B.Tech CSE graduate (CGPA 7.75) from Madhyanchal Professional University, Bhopal. Fresher seeking a full-stack development role. Builds and deploys production-ready applications using the MERN stack. Participated in Smart India Hackathon 2024, developing an ML-based fake social profile detection system. Comfortable owning a feature end-to-end — from MongoDB schema design to React UI to cloud deployment.

TECHNICAL SKILLS

MERN CORE

MongoDB Express.js React.js Node.js

BACKEND & APIS

REST APIs JWT Auth Mongoose ImageKit Postman

FRONTEND

HTML5 / CSS3 JavaScript ES6+ Tailwind CSS

ML & TOOLS

Python scikit-learn NumPy · Pandas Git / GitHub Vercel · Render MySQL Figma

EXPERIENCE

Fresher — Open to Full-Stack / MERN Developer Roles

AVAILABLE IMMEDIATELY

- No prior corporate experience; all hands-on work is through self-initiated projects and hackathon participation
- Built, deployed, and maintained two live production applications independently (Hospital Management System, Car Rental System)
- Actively looking for an entry-level role where I can contribute to real products and grow under experienced developers

PROJECTS

Fake Social Profile Detector

SIH 2024 — PROBLEM #1775

[GitHub](#)

Python · scikit-learn · Neural Network · Random Forest · SVM · NumPy · Pandas · Jupyter

- Smart India Hackathon 2024 submission — built ML pipeline to detect fake profiles in online social networks
- Implemented and benchmarked three classifiers (Neural Network, Random Forest, SVM) to identify the most accurate model for this dataset
- Feature engineering on account metadata and behavioral patterns; documented results in Jupyter notebooks with evaluation metrics

Hospital Management System

✓ LIVE & DEPLOYED

[Live Demo](#) [GitHub](#)

MongoDB · Express.js · React · Node.js · JWT · Tailwind CSS

- Full-stack HMS with three role-based panels — patient portal, doctor dashboard, and admin console — each with scoped access via JWT middleware
- Patient module: registration, appointment booking with doctor selection, and appointment history
- Admin panel: manage doctors, patients, and all appointments from a centralized dashboard

Car Rental System

✓ LIVE & DEPLOYED

[Live Demo](#) [GitHub](#)

MongoDB · Express.js · React · Node.js · JWT · ImageKit · Vercel · Render

- Full-stack car rental platform with role-based access — user portal (browse, book, manage reservations) and admin dashboard (manage cars, users, bookings)
- Secured all private routes with JWT middleware on both frontend and backend; integrated ImageKit for cloud image uploads
- Designed and documented 15+ REST API endpoints; deployed frontend on Vercel and backend on Render
- Features include search & filter by car type, date-based availability, and complete booking history

EDUCATION

B.Tech — Computer Science & Engg.

2022 – 2026 (Graduated)

Madhyanchal Professional University, Bhopal

CGPA: 7.75/10

Class XII (Intermediate)

V.M. Inter College, Gopalganj, Bihar

57%

HIGHLIGHTS

- Smart India Hackathon 2024 — selected participant, built ML system for fake profile detection (Problem #1775)
- Production-deployed full-stack app (CarRental) — live on Vercel with active GitHub repo (3 stars)
- 21 public GitHub repositories spanning MERN, Python, ML, and frontend domains
- Familiar with full deployment pipeline: local → GitHub → Vercel / Render
- Additional exposure to MySQL (relational databases) and Figma (UI design & prototyping)
